

WINTER WHEAT

JPS Early

Controlled earliness.

JPS Early is an early-maturing, quality-oriented blend of wheat varieties, predominantly bearded. Two of the three component varieties are bearded, giving it a distinctive look in the field. The blend delivers an above-average yield compared to its components grown pure, with enhanced stability and less exposure to late-season risks. Its health benefits and lodging resistance add up to a more flexible harvest and consistent quality. Treated with B-UP Coating for secure emergence.

SOWING INFO

MID-OCTOBER

300 grains/m²

NOVEMBER & DECEMBER

400 grains/m²
