

Tournière (MAE- MB5)

The extensive grass-clover mixture!

COMPOSITION

Tall fescue	30%
Meadow fescue	25%
Lucerne	6%
Perennial ryegrass	25%

White clover	4%
Crimson clover	5%
Red clover	5%

CHARACTERISTICS

- An extensive mixture of grasses and clovers for sowing a grass strip along the edge of plowed farmland. Ideal for field margins, which are often less productive, for grassland that is used in a low-intensive manner and without inputs. These grass strips have become essential for the ecological network in the Walloon region.

USE

- Can be mowed and harvested from 16/7 to 15/10.
- Maintains biodiversity.
- Limits soil erosion.
- Filters surface and groundwater.
- Buffer effect on possible deviations or landslides.
