

Flowered meadows

MP08635 - Wild flowers - Flowers from nature

CHARACTERISTICS

A natural rural wildflower meadow designed primarily to enhance biodiversity by introducing wild flowers and in particular wild arable plant species. This mixture provides a highly varied flowering display from April to June in the years following sowing, even if initial establishment may appear slow. The presence of robust perennial plants within the mixture ensures a long-lasting wild flower vegetation. To guarantee its natural persistence, the mixture should be mown and mulched in September during the first year, and in July in subsequent years.

Plant height: 30–70 cm

Flowering: from spring onwards

Composed of 9 annual and 28 perennial species.

COMPOSITION

Alpine aster	<i>Aster alpinus</i>	Bullwort	<i>Ammi majus</i>
Bird's-foot trefoil	<i>Lotus corniculatus</i>	Common mallow	<i>Malva sylvestris</i>
Black-eyed Susan	<i>Rudbeckia hirta</i>	Corn Cockle	<i>Agrostemma githago</i>
Blanketflower	<i>Gaillardia aristata</i>	Corn Marigold	<i>Chrysanthemum segetum</i>
Boreal chickweed	<i>Cerastium biebersteinii</i>	Dill	<i>Anethum graveolens</i>
Brown knapweed	<i>Centaurea jacea</i>	Gayfeather	<i>Liatris spicata</i>
