

Flowers for honey and butterflies

MP08691 - Ecosystems - Biodiversity

CHARACTERISTICS

This perennial flower mixture was developed in collaboration with entomologist Jérôme Yvernault and beekeepers. The diversity of species ensures a spread of flowering periods and adaptability to many types of terrain. This nectar mixture is ideally suited for beekeepers, but also provides shelter for many species of insects and small creatures that find refuge and a food source within it. The species in this mixture have been selected for their fragrant and flavourful nectar.

The reference in bee mixtures!

Plant height: 40–70 cm

Flowering:

From summer onwards when sown in spring

From spring onwards in subsequent years

Composed of 23 annual and 278 perennial species.

COMPOSITION

Black-eyed Susan	<i>Rudbeckia hirta</i>	Common mallow	<i>Malva sylvestris</i>
Blue lupin	<i>Lupinus angustifolia</i>	Corn Marigold	<i>Chrysanthemum segetum</i>
Borage	<i>Borago officinalis</i>	Corn poppy	<i>Papaver rhoeas</i>
Brown knapweed	<i>Centaurea jacea</i>	Cornflower	<i>Centaurea cyanus</i>
Canterbury Bells	<i>Campanula medium</i>	Cosmos sulphureus	<i>Cosmos sulphureus</i>
Catmint	<i>Nepeta racemosa</i>	Dahlia	<i>Dahlia variabilis</i>
