

Tournière (MAE-MB5)

The extensive grass-clover mixture!

COMPOSITION

Perennial ryegrass	25%	White clover	4%
Tall fescue	30%	Red clover	5%
Meadow fescue	25%	Crimson clover	5%
Lucerne	6%		

CHARACTERISTICS

- A complex grassland mixture of grasses and clovers for sowing grass strips along the edge of arable land. Ideal for field margins, which are often less productive. These grass strips have become essential for the ecological network (MAE-MB5) in the Walloon region. Also extremely suitable for sowing protection strips (MAP 7) in Flanders.

USE

- Can be mowed and harvested from 16/7 to 15/10.
- Maintains biodiversity.
- Limits soil erosion.
- Filters surface and groundwater.
- Ideal for sowing protection or buffer strips.
