

Perennial mixture of grassland legumes

COMPOSITION

Yarrow	1%
Wild carrot	1%
Lucerne	17%
Common vetch	18%

White clover	22%
Red clover	33%
Bird's-foot trefoil	8%

CHARACTERISTICS

- Perennial mixture of grassland legumes for the management agreement "flower field".
- A flower field increases the food supply (pollen & nectar) for insects (bees & butterflies).
- This increases their survival chances. More insects also means more food for all field birds.
- SOWING INFO
- Sow in late summer before the start of the management agreement or at the latest before May 1st of the 1st year.
- Resow in late summer of 2nd or 3rd year
- Each year:
 - In June mow 1/2 of the plot, the other 1/2 of the plot may (not mandatory) be mowed from mid-July.
 - Mow complete area between September 15th and October 31st.
 - Always remove mowing residue.

USE

- In accordance with management agreement "flower field"
