

1-year flower mixture

COMPOSITION

Fodder rape	20%
German chamomile	5%
Black mustard	10%
Lucerne	5%
Red clover	10%

Dill	5%
Cornflower	15%
Common vetch	15%
Common poppy	15%

CHARACTERISTICS

- Annual flower mixture, resow every year, complies with the "flower field" management agreement. A flower field increases the food supply (pollen & nectar) for insects (bees & butterflies). This improves their survival chances. More insects also means more food for all farmland birds.
- SOWING INFO
- Sow every year before May 1st at the latest, preferably the preceding autumn.
- Resow every year.
- OR
- With sufficient spontaneous growth from the 2nd year onwards, resow half of the area.

USE

- In accordance with "flower field" management agreement
